1. Overview

The Low Poly Modular Road Pack is a collection of modular road pieces designed for creating streets, intersections, and road networks in low poly environments.

This package contains only art assets and does not require any coding or custom shader setup.

2. Package Contents

Included assets:

- Straight Road Module
- Curved Road Module
- Intersection Road Module
- Sidewalk Modules
- Prefabs
- Demo Scene
- Materials

Technical Information:

- Asset Type: 3D Models
- Style: Low Poly
- Formats: FBX

- Materials Included: Yes
 - Texture Maps: Base Color / Albedo
 - Custom Shaders: None
 - Scripts: None
 - LODs: None
 - Demo Scene: Included
-

3. Importing the Asset

Step 1:

Import the package into your Unity project.

Step 2:

Open the package folder.

Step 3:

Drag and drop the included prefabs into your scene.

Step 4:

Arrange the modules to create your desired road layout.

4. Demo Scene

A demo scene is included to showcase the road modules and provide an example setup.

Open the Demo Scene folder and load the scene to view the example layout.

5. Notes

No scripting knowledge is required.

No custom shader setup is required.

The package uses standard Unity materials and is ready to use after import.
